

PROJECT PROFILE

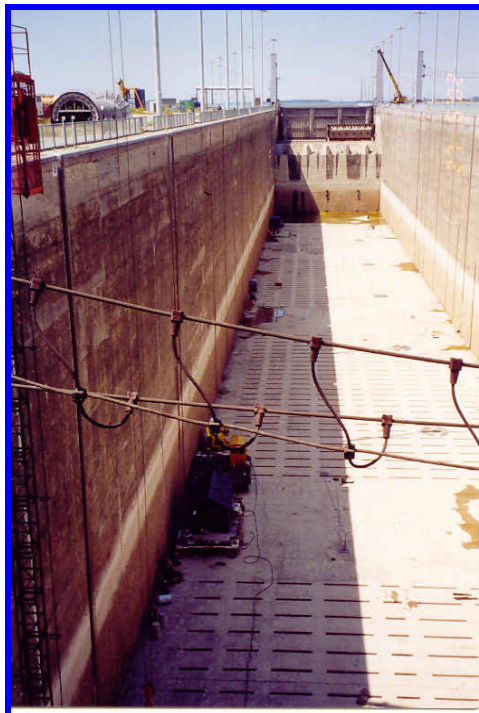

Project: Dam repairs, Slovakia

Designer: Ministry of Energy, Government of Slovakia.

Gemite product: **Adi-Con CSF (R)**

Objective: repair deteriorated concrete in the canals connecting the lock chambers on the largest dam on Danube River – Gabčíkovo. The losses of concrete sections, up to 50 cm deep, were caused by the cavitation, due to high speed and large volumes of water flowing through. **Adi-Con CSF(R)** concrete was used in the repairs in 1998. The inspections show a considerably better resistance of **Adi-Con CSF(R)** concrete when compared with the original.
