

Crystalline Waterproofing Admixture for Concrete = Adi-Con CW Plus

Gemite Products Inc. offers an innovative waterproofing admixture for concrete with an advanced crystalline technology, that is simple to use and extremely economical. Adi-Con CW Plus, supplied as a dry powder, integrally waterproofs concrete across a wide range of water-cement ratios, and has a minimum effect on concrete setting. Adi-Con CW Plus is mixed with concrete or mortar at the time of batching at a typical dosage of 0.8-1.5% by the weight of cement. By rendering concrete watertight under water head pressure, it significantly increases the durability of concrete, and thus extends the Life Cycle of the structure. The main application of the Adi-Con CW Plus is in construction of water reservoirs, wastewater treatment facilities, secondary containment structures, tunnels, underground vaults, foundations and parking structures.

The key advantages of Adi-Con CW Plus are:

- Resists high hydrostatic pressure
- Provides integral waterproofing
- Reduces the penetration of Water, Carbon Dioxide, Chlorides and other chemicals
- VOC compliant
- Minimal effect on setting times
- Increases concrete durability
- Permanent
- Simple use
- Economical
